Male External Urine Management Device

- ✓ 99.6% Accurate Measurement¹
- ✓ One Size fits all
- ✓ Keeps skin dry
- ✓ Derma friendly, soft & flexible adhesive
- ✓ No leakage or vacuum lock
- ✓ Suction tube on top

QiviTM
CAUTI Prevention

A novel male external urine management device that provides accurate output measurement, minimizes IAD and MASD, prevents CAUTI and eliminates Urethral trauma - visit www.MyPelvicHealth.co.uk and search Qivi MEC.

1) Data on company file.

2) Carolyn V. Gould, 'Guideline for Prevention of Catheter-Associated Urinary Tract Infections' CDC

3) Gardam M A, 'Overutilization of indwelling urinary catheters and the development of nosocomial urinary tract infections'

4) Campbell JL, et al. Incontinence-associated dermatitis: a cross-sectional prevalence study in the Australian acute care hospital setting. International Wound Journal

EXISTING SOLUTIONS ARE INADEQUATE

Underpads

- Leads to constant exposure to Urine
- Leads to skin breakdown, IAD, MASD
- Output measurement not possible
- Leads to increased nursing time, nurse fatigue and back injuries

Indwelling Urinary Catheters

- Account for more than 75% of HAUTI's²
- Up to 50% catheters are avoidable in acute care³
- Cause injury, bladder spasm, rupture, etc.
- Prone to causing bacteriuria, bladder stones, AKI, Sepsis

Condom/Sheath Catheters

- Inefficient at keeping skin dry
- Frequent size misfit challenges, uncomfortable for the patient
- Prone to leakage, skin abrasion, penile strangulation

INADEQUATE SOLUTIONS LEAD TO COMPLICATIONS

CONSTANT EXPOSURE TO URINE, BACTERIA, MOISTURE

CONSTANT EXPOSURE TO URINE, BACTERIA, MOISTURE

SLIZE MISFIT LEADING TO STRANGULATION

IAD

21-42% incontinent patients develop IAD⁴

HAPI

Up to 2.5M patients acquire HAPI each year⁵; Costs upto \$21,410 per patient⁶

Wound Contamination

Open systems are inefficient at protecting wounds from getting contaminated by UI

CAUTI

CAUTI prevalence goes up to 7.5/1000 catheter days⁷
True cost per infection is \$10,197⁸

Urethral Injury

Leads to additional LOS of 9.4-19 days
Costs up to \$10,048 per injury⁹

Bladder Stones

Prolonged catheterization may lead to bladder and kidney stones
Costs more than \$5Billion each year¹⁰

Maceration

Penile complications can arise in 15-30% chronic condom catheter users¹¹

Strangulation

Incorrect sized sheaths secured with multiple tapes & adhesives may cause strangulation

Gangrene

Extremely rare, but may lead to surgical intervention, prolonged LOS and permanent damage

QiVi is a safe, efficacious, and comfortable alternative for urine management. Nurses across the continuum of care are making the switch. Order your free trial today!
